

Terrorist Bombs: The Practical Facts

Providing an introduction to the lethal, but often simple world of improvised explosive devices

With the proliferation and transfer of bomb tactics and technology by global violent extremist organisations, the breadth and scope of the security challenge can often become overwhelming. Underpinning any sound security decisions is an accurate understanding of the nature of the terrorist bomb threat. If the starting point is wrong, then measures and resources can be misused.

*Mr Andrew Coe
Key presenter*

This session is for leaders and managers who work in industries that directly or indirectly deal with the challenges posed by terrorist explosive devices. This includes the sale and security of components, physical screening of people or their property, or in the protective measures to counter the threat. The aim is to provide a base level of understanding so as to enable identification and management of risks that exist in Australia relating to terrorist bomb attacks.

Andrew Coe (Red Team Training Solutions)

With over 18 years military experience and 6 years concurrent experience in the private sector, Andrew provides a succinct look into the nature of the terrorist bomb threat. His military background includes deployments in the Middle-East and the Pacific in a variety of roles, and he also holds tertiary scientific qualifications. The latter half of Andrew's military career has been within Australian Army Special Operations focusing on domestic and overseas bomb threats.
